

Pintu Kumar

Java Backend Engineer

thepintukumarr@gmail.com | +91 8744941083 | New Delhi, India | linkedin.com | github.com

PROFESSIONAL SUMMARY

Software Engineer specializing in backend and distributed systems with 3 years of experience in Java-based microservices. Experienced in designing concurrent, event-driven architectures with strong emphasis on scalability, fault tolerance, and performance optimization. Hands-on with Redis, AWS, and real-time communication systems. Passionate about solving complex systems problems and building high-throughput, production-grade infrastructure.

SKILLS

Backend & Languages: Java, JavaScript, System Design, Microservices Architecture

Databases, Caching & Messaging: MySQL, MongoDB, Redis, Apache Kafka, RabbitMQ, Data Modeling

DevOps, Cloud & Infrastructure: Docker, AWS, Linux, Git, Bitbucket, CI-CD, Server Optimization

Frameworks & Technologies: Java EE, Servlets, JSP, Spring Boot, Hibernate, OAuth 2

Testing & Tools: Postman, API Testing, Integration Testing

PROFESSIONAL EXPERIENCE

Avarna Technology LLP, Software Engineer

May 2023 – Jan 2026 | Remote, India

- Engineered a high-frequency, real-time Order Management System (OMS) using concurrent and multi-threaded processing, integrating Betfair APIs to handle parallel market events and order executions with ultra-low latency and high availability.
- Architected an event-driven system design leveraging WebSocket-based asynchronous messaging, enabling high-throughput, non-blocking communication and real-time propagation of market data and order state changes under heavy trading loads.
- Optimized system performance by implementing thread-safe data structures, efficient synchronization mechanisms, and asynchronous workflows, ensuring scalability and deterministic behavior during peak market volatility.
- Built and maintained backend services using Java EE (J2EE) standards including Servlets and RESTful APIs, ensuring scalable, modular, and enterprise-grade system design aligned with distributed microservices architecture.
- Designed and implemented a high-frequency trading simulator that emulates Betfair order books and market microstructure, enabling parallel simulation of multiple markets for back-testing, stress testing, and validation of order management logic.

Masai Labs, Software Developer

Dec 2022 – Apr 2023 | Remote, India

- Owned end-to-end backend architecture and delivery for Masai Learn and Gradigi, engineering scalable, low-latency RESTful services using Java, Spring Boot, Hibernate, and MySQL within a production-ready three-tier architecture.
- Partnered cross-functionally with frontend (React/Redux) and product teams to rapidly ship data-driven features, implementing JWT-based authentication and Spring Security to ensure secure, stateless, and high-availability user workflows.
- Led containerization and cloud deployment using Docker and AWS EC2, configuring Nginx for reverse proxy and load balancing to handle concurrent traffic, optimize system throughput, and maintain production-grade reliability in a fast-paced startup environment.

EDUCATION

A.P.J. Abdul Kalam University, B.Tech (Computer Science)

Aug 2023 – Present | Uttar Pradesh, India

Masai School, Full Stack Web Development

Jan 2022 – Nov 2022 | Bengaluru, India
